The Advantages of Onsite Electrostatic Painting

RE-FINISH TO FACTORY CONDITION – ONSITE!

Your solution for Low VOC and Green Building

Venger Group is proud to continue its leading role in onsite electrostatic paint solutions. Interior projects can now benefit from our latest product, a water based no VOC (.008lbs/gal) product. Even the most stringent LEED certified standards can utilize the Venger onsite electrostatic finish. Exterior projects will benefit from a urethane acrylic which will retain its gloss, won't fade or chalk like traditional applications and is proven for exceptional adhesion.

Using Venger on your next renovation or maintenance project will save you money.

Venger electrostatic painting is a unique metal coating process. It uses the laws of static electricity to suck paint onto the target metal surface. That means there is no over spray to surrounding walls, furniture, fixtures, parking lot, etc. Benefit from our experience gained during 25+ years in business today.
